

# Demand Response Solutions

**Network Frequency Management**  
*Instantaneous ADR Demand Response*  
*DRPro Knowledge Application*

*DRPro is a complete end-to-end solution for assisting with frequency regulation.*

## **DEMAND RESPONSE MANAGEMENT MADE EASY** **Instantaneous ADR Demand Response Solutions**

By using our DRPro ADR platform and technology, you can remove large quantities of load from your network with a near real-time response (seconds).

When an instantaneous customer's load reduction is required in response to an electricity system frequency drop, we install specialised control and measurement equipment at the customer's premises. This enables a totally hands-off dispatch response from the customer, once the configurable 'trigger point' is reached.

The customer makes sections of plant available for instantaneous shutdown, typically for periods less than 10 minutes (configurable). This makes it easier for utilities to keep the interconnected system stable.

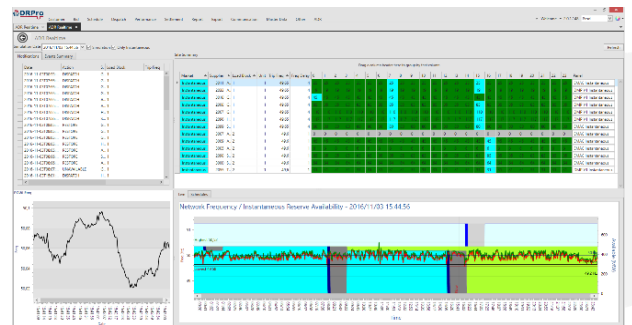

On-site equipment integrates with the DRPro platform to ensure end-to-end integration and quick presentation of the results for portfolio management, performance reporting and financial settlements.

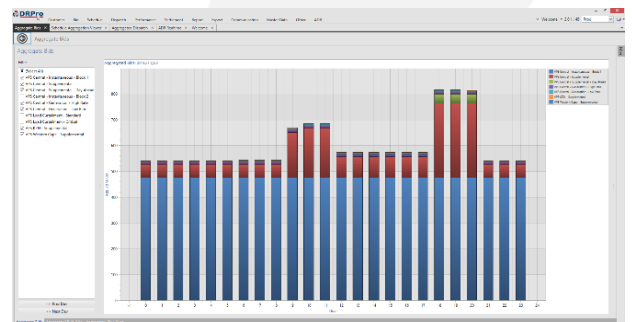

**Instantaneous Demand Response is a key tool for a utility or system operator to manage the network frequency.**

*Real-time event information at a glance*

*Daily real-time dashboard*

*Portfolio information at a glance*

## **Quick – Easy – Auditable**
